

Dear Hiring Manager,

I'm a Computer Science graduate from Bahria University with a focus on backend engineering and AI systems. I've spent the last two years building production APIs, prototyping agentic workflows, and shipping projects that go beyond coursework — including work in **agentic AI** and **RAG pipelines**.

During my internship at **Agentic Soft**, I developed and maintained production RESTful APIs using FastAPI and NestJS, implemented JWT-based authentication and authorisation flows, and participated actively in code reviews to uphold clean architecture standards. At **SoftBox Technologies**, I performed exploratory data analysis using Pandas and NumPy, produced Power BI dashboards, and presented data findings to non-technical stakeholders.

My Final Year Project, **VisiHealth AI**, represents my strongest demonstration of end-to-end delivery. I designed a Medical Visual Question Answering system using a Dual-Encoder and Multi-token Cross-Attention architecture with BioLinkBERT, trained on the SLAKE dataset, and engineered the complete backend infrastructure — including inference APIs, ROI localisation, and data processing pipelines. The project was awarded **1st place at the BSEAS FYP Open House 2026**.

In addition, I have delivered the following projects:

AccessHire — Engineered the complete backend for an AI-powered job portal for visually impaired users, including NestJS REST APIs, JWT authentication, MongoDB integration, a content-based recommender system, and a FastAPI microservice for speech-to-text and text-to-speech functionality.

VelocityMD — Designed and implemented RESTful APIs and scheduling logic for a doctor appointment system, including conflict detection and full authentication (FastAPI).

Narrative Mutation Tracker — Built a multi-agent RAG pipeline to trace viral news claims across global media using semantic search, LLM reasoning, and a custom Streamlit UI; features include origin detection, narrative drift scoring, and source credibility analysis.

My background sits at the intersection of backend engineering and applied AI — which is where I want to keep building.

Happy to chat — reach me at hammad.rehman2004@gmail.com or on LinkedIn at linkedin.com/in/hammad2004.

SINCERELY

Hammad Ur Rehman
