

Dear Hiring Manager,

I am a Computer Science graduate from Bahria University with a focus on backend engineering and AI systems. I am actively seeking a backend or AI/ML engineering role where I can contribute to production-grade systems and continue developing my expertise in **agentic AI** and **RAG pipelines**.

During my internship at **Agentic Soft**, I developed and maintained production RESTful APIs using FastAPI and NestJS, implemented JWT-based authentication and authorisation flows, and participated actively in code reviews to uphold clean architecture standards. At **SoftBox Technologies**, I performed exploratory data analysis using Pandas and NumPy, produced Power BI dashboards, and presented data findings to non-technical stakeholders.

My Final Year Project, **VisiHealth AI**, represents my strongest demonstration of end-to-end delivery. I designed a Medical Visual Question Answering system using a Dual-Encoder and Multi-token Cross-Attention architecture with BioLinkBERT, trained on the SLAKE dataset, and engineered the complete backend infrastructure — including inference APIs, ROI localisation, and data processing pipelines. The project was awarded **1st place at the BSEAS FYP Open House 2026**.

In addition, I have delivered the following projects:

AccessHire — Engineered the complete backend for an AI-powered job portal for visually impaired users, including NestJS REST APIs, JWT authentication, MongoDB integration, a content-based recommender system, and a FastAPI microservice for speech-to-text and text-to-speech functionality.

VelocityMD — Designed and implemented RESTful APIs and scheduling logic for a doctor appointment system, including conflict detection and full authentication (FastAPI).

Metro Ticketing System — Developed a full-stack MERN ticketing platform encompassing seat selection through to booking confirmation.

I am confident that my technical background, combined with my growing knowledge of agentic AI and retrieval-augmented generation, positions me well to make an immediate and meaningful contribution to your engineering team.

I would welcome the opportunity to discuss how my experience and skills align with your team's needs. Please feel free to reach me at hammad.rehman2004@gmail.com or via LinkedIn at linkedin.com/in/hammad2004. Thank you for your time and consideration.

SINCERELY

Hammad Ur Rehman

CS Graduate · Backend & AI Engineer
